HRISTIJAN MIJALKOV

FULL STACK & AI ENGINEER

hristijanmijalkov5@gmail.com | Skopje, North Macedonia | linkedin.com/in/hristijan-mijalkov | dawnlearn.com | github.com/HowlinMan24

PROFESSIONAL SUMMARY

- 4+ years shipping full stack web systems, front end to back end, across banking, SaaS, ERP, CMS and AI.
- Founded Redproof (security for AI-built apps), ColdLatch (cold chain with SAP) and DAWN (teaching platform).
- Core stack: Angular · React · Node.js · Go · FastAPI · AWS · MySQL · PostgreSQL · TypeScript · Terraform.

EDUCATION

Faculty of Computer Science and Engineering (FINKI), UKIM — Skopje, North Macedonia
B.Sc. Computer & Software Engineering

Certifications: AWS Certified Cloud Practitioner

Languages: Macedonian (Native) · English (C1) · German (A2)

PROFESSIONAL EXPERIENCE

Vista Point — Skopje, North Macedonia
Senior Full Stack Engineer — *May 2022 – Present*
Tech: Angular, NestJS, Node.js, .NET, Contentful, Azure, MySQL, MongoDB, Redis, JWT, OAuth 2.0, Docker

- Built and maintained, together with the founder, a **banking software platform used by multiple client banks**, covering identity verification, international money transfers, and currency trading.
- Built **KYC and wire-transfer workflows**: profile approvals, document management, bulk uploads, time-zone cut-offs.
- Designed **webhook events** for KYC status changes, signed with HMAC, and documented the public API with OpenAPI.
- Hardened **security** with OAuth 2.0 (login, service-to-service, bank clients), 2FA, JWT and refresh-token rotation.
- Migrated **client websites from AEM to Contentful** with .NET: content import, APIs, page rendering, auth, hosting on Azure.
- Fixed a **performance bottleneck** at peak transaction load with Redis caching and rewritten MySQL queries. Mentored interns.

Xient GmbH — Germany (Remote)
Backend and AI Engineer — *Jun 2024 – Sep 2026*
Tech: FastAPI, Python, Go, AWS, Next.js, React, SAP, Copilot Studio, Terraform

- Built a live **business dashboard inside Microsoft Teams** (FastAPI, SAP BW/4HANA KPIs) for company performance data.
- Built a **tool that crawls an internal documentation site** and exports organized PDFs, with live progress.
- Connected the **internal SAP system to an AI model on local company hardware** (Ollama on an Nvidia DGX Spark, via RFC/BAPI and OData), so no business data left the building.
- Built **Microsoft Copilot Studio agents** with Power Automate flows that query the on-premise SAP system read-only, so purchasing and finance staff can ask plain-language questions about contracts, balances and production orders.
- Built an **AI assistant** answering questions from company documents and live SAP data, with a from-scratch search-ranking step benchmarked against a ChromaDB baseline.

Support Kocani — North Macedonia
Volunteer Developer — *Mar 2025 – Apr 2025*
Tech: PHP, Laravel, AWS, OpenAI Vision API

- Launched a donation-tracking website in **72 hours** during a local disaster, and used AI to auto-read bank transfer screenshots, cutting manual data entry by **about 4 hours a day**.

Freelance — North Macedonia
Full Stack Engineer & Tutor — *Sep 2021 – Present*
Tech: Angular, Node.js, Python, FastAPI, PHP

- Delivered two **client websites**; tutored students in Angular, Node.js, Python and SQL; building **Close**, a financial close engine.

PROJECTS

Redproof (redproof.dev): security checks for AI-built apps — *Founder · live in production*
Tech: NestJS, Angular, MySQL, Claude API, AWS, Docker, Terraform

- 44 code checks plus a **Claude AI review**; raised rule precision from 71% to 95% on 34 hand-labelled repositories.

ColdLatch (coldlatch.com) — *Founder · live in production*
Tech: NestJS, Angular, MySQL, MQTT, SAP S/4HANA OData, AWS, Docker, Terraform

- Built **ColdLatch**, multi-tenant cold-chain monitoring: a temperature excursion becomes a **signed batch block in SAP S/4HANA** (OData), with a hash-chained audit log; on AWS with about 1,200 automated tests.

DAWN (dawnlearn.com) — *Founder · live in production*
Tech: Go, Angular, PostgreSQL, Terraform, SSR/SSG

- Built and launched **DAWN** solo, a bilingual (English/Macedonian) platform that teaches coding and economics: **Go** backend, **PostgreSQL**, **Angular** frontend, Terraform-managed infrastructure. Has delivered lessons to **30+ students**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Java, C#, Python, SQL, Bash/Shell, HCL
Web & APIs: Angular, RxJS, React, Node.js, NestJS, FastAPI, Spring Boot, .NET, REST, OpenAPI, HTML, CSS, SEO, WCAG
Databases: MySQL, PostgreSQL, MongoDB, Redis, AWS RDS
Cloud & DevOps: AWS (S3, EC2, IAM, CloudFront, Lambda), Terraform, Docker, Kubernetes, CI/CD, GitHub Actions, Linux
Data & Architecture: ETL Pipelines, PySpark, Kafka, Pandas, Databricks, Microservices, Event-Driven
AI & ML: RAG, Vector Search (ChromaDB), LLM Agents, Tool Calling, Ollama, Copilot Studio, AI Automation, OpenAI
