EDUCATION

Faculty of Computer Science and Engineering
Software Engineering

Skopje, North Macedonia

AWS
AI Practitioner

North Macedonia

Languages
English - C2(Fluent)
German - A2
Macedonian - Native

WORK EXPERIENCE

Vista Point
Full-stack Developer

North Macedonia

May 2023 - Present

- Built and maintained a secure banking and e-commerce platform using Angular, NestJS (Node.js/TypeScript), MySQL, and Redis, working on features such as customer onboarding flows, payment pages, and internal admin dashboards.
- Refactored legacy Angular code into reusable components and services, making it easier to add new flows (KYC profiles, wire transfers, FX trades) without duplicating logic.
- Designed and implemented REST APIs in NestJS, integrating them with the Angular front end and securing them with JWT-based authentication and role-based access control.
- Introduced Redis caching and optimized database queries on high-traffic endpoints, reducing unnecessary queries and improving responsiveness for daily users.

Xient Gmbh
Data Scientist & SAP x Hypatos

Germany, Remote

Jun 2025 - Present

- Designed and implemented predictive models (e.g. classification, regression, time series) to forecast key business metrics like revenue, churn, and demand, improving forecasting precision.
- Conducted data analysis and ETL pipeline development to extract, transform, and load complex datasets from multiple sources, uncovering key insights with PySpark that increased strategic decision efficiency

Support Kocani
Humanitarian

North Macedonia

Mar 2025 - Apr 2025

- Helped the team of devs to make and deploy the app <https://supportkocani.com> to help the injured of the tragedy in my hometown of Kocani. Used PHP(Laravel) and AWS for data entry, analysis and hosting of the app.
- Helped the Lead Developer of the project to implment the OpenAI API and we tested different LLMs to scrape wire images and check images to sum up the total donation to the injured.
- Helped in the entry data, data from wire screenshots and check screenshots

Freelance
Full-stack Developer/Tutor

North Macedonia

Dec 2021 - Present

- Developed simple, clean websites for a solar electricity provider and a PVC construction company using modern JavaScript stacks and responsive layouts.
- Implemented contact forms and basic admin views so clients could manage inquiries and update content without needing a developer.
- Ran 1-on-1 and small group sessions on web development (HTML/CSS/JavaScript, Angular, Node.js) and data programming (Python, Pandas, SQL, ML, Deep Learning).

Hackaton

North Macedonia

- Participated in an international bioinformatics hackathon organized by Loka and nf-core, collaborating with researchers and engineers on real-world data pipelines.
- Contributed code, debugging, and documentation to improve reproducible workflows, gaining hands-on experience with open-source development and teamwork under time pressure.

QUALIFICATION SUMMARY

Full-stack engineer and aspiring data scientist with experience building secure web applications and end-to-end machine learning pipelines. Comfortable working across the stack with Angular, NestJS, Node.js, MySQL, Redis, and Python-based data tooling (Pandas, scikit-learn, PySpark). Particularly interested in financial systems, fraud detection, and data-driven decision making. Hands-on with AWS, Databricks, Big Data, Docker, Kubernetes, Jenkins and modern development workflows (Git, CI/CD).

SKILLS & INTERESTS

Programming: Java, Python, C#, JavaScript, TypeScript, SQL, Shell
Web: Angular, Node.js, [.NET](#), Spring, HTML5, CSS3, Tailwind, NestJS, REST APIs, Web Sockets, Nginx, Apache
Databases: MySQL, PostgreSQL, MongoDB, Redis, AWS RDS, AWS Aurora
Data: Spark, Flink, Big Data, PySpark, ML, Deep Learning, EDA, Data Mining, ETL, MLOps, Databricks
DevOps: AWS (S3, EC2, IAM, CloudFront), Docker, CI/CD, Git, Github, Jenkins, Kubernetes, SSH, Deployment
Services: SAP, Hypatos, AWS, Braid, HawkAI, Dockerhub, Postman, Jira, Confluence, Gitlab, Contentful, Slack, Ngrok

PROJECT EXPERIENCE

Vista Point North Macedonia
Calendar SaaS App May 2024 - Present

- Built a Calendar SaaS web app (Google Calendar-style) for managing events across multiple calendars, using Angular on the front end and NestJS/Node.js with MySQL on the back end.
- Implemented reusable Angular components for month/week/day views, event dialogs, and filters, so new calendar features could be added without rewriting the UI.
- Containerized the application with Docker and helped configure Nginx and environment settings for development and production deployments.

Personal North Macedonia
Algorithms Visualizer Feb 2023 - Apr 2025

- Created an interactive website that visualizes classic algorithms such as sorting and pathfinding, showing each step as an animation.
- Organized the code into separate JS modules (e.g., sorting vs. pathfinding) and CSS files for layout and animations, keeping the logic and visualization cleanly separated.
- Designed simple controls so users can choose the algorithm, change input size, and adjust animation speed, making the tool useful as a learning and demo resource.
- Hosted the project on GitHub and structured it as plain HTML/CSS/JavaScript with no frameworks, to focus on understanding the core algorithmic logic.
